ACCEPTABLE COMMON NAMES AND CHEMICAL NAMES FOR THE INGREDIENT STATEMENT ON PESTICIDE LABELS

FOURTH EDITION

This current edition is a revision and extension of the 3rd edition of December 1975. The main purpose, for reviewers and registrants as before, is the naming of pesticides on label ingredient statements. If both common and chemical names are given an "Entry" number (accession number), then both are required on the label. Almost all of the listed names are active ingredients; however, some may now be obsolete and others not yet registered. For information, therefore, on the registration status of any pesticide, contact the Registration Division, Office of Pesticide Programs, Environmental Protection Agency, 401 M St. S.W., Washington, D.C. 20460; Attn: Mr. Shaughnessy.

All names are listed alphabetically with the acceptable names numbered consecutively in the left-hand column under the designation "Entry No." All other names, including trade and chemical ones for which a common name has been established, are listed without a number in the left-hand column. The user is directed in the right-hand column ("Refer to Entry No.") to the Entry No. of the acceptable name. Brackets at the end of the acceptable name designation enclose other names (trade, synonym, obsolete) and, occasionally, other identifying numbers (CAS Registry No., ENT No.).

The legal requirements are stated as follows in the Code of Federal Regulations, Title 40, Protection of Environment: 162.10(g)(3).

> Names to be used in ingredient statement. The name used for each ingredient shall be the accepted common name, if there is one, followed by the chemical name. The common name may be used alone only if it is well known. If no common name has been established, the chemical name alone shall be used. In no case will the use of a trademark or proprietary name be permitted unless such name has been accepted as a common name by the Administrator under the authority of Section 25(c)(6).

Acceptable names are generally those adopted by the American National Standards Institute (ANSI), or by the former (federal) Interdepartmental Committee on Pest Control. The chemical names are usually those established by the American Chemical Society (ACS), or those which have been long accepted and are most informative. Descriptive names are used for ingredients of indefinite composition.

New common names are continually being adopted by ANSI (occasionally deleted also), and changes in chemical nomenclature appear every few years. The present edition reflects all changes known to the authors as of December, 1979.

Names have been established or accepted by the following:

ANSI:	K62 Committee of the American National Standards Institute, Inc.; proposed names are designated: ANSI prop
BSI:	British Standards Institution
CA:	Chemical Abstracts Service (CAS) of the American Chemical Society; CA* designates 1972 index names
CAN:	Canada Department of Agriculture (Ottawa)
ENT:	Entomology Research Division, Agricultural Research Service, U.S. Department of Agriculture. Following reorganization of ARS in 1972, ENT numbers were replaced by AI_3 numbers, but the numerical sequence is continuous.
FDA:	U.S. Food and Drug Administration
ISO:	International Organization for Standardization (Organisation Internationale de Normalisation)
Official:	former Interdepartmental Committee on Pest Control
USSR:	Soviet Union

****

Note: The mention of trade or proprietary names does not imply an endorsement by the U.S. Environmental Protection Agency or any other federal agency.
